

gem5 Neoverse-V2 FDP — the ExpediTe model

EVES + VTAGE; predicts the 62-bit header, `isb sy` for the bracket

Apple M4 — shipping silicon

load value predictor: 36 bits, measured; the bracket's real `sb`

- blanket DIT
- Apple's bracket at the crypto call (mrs DIT, msr #1, sb, call, restore)
- the same bracket, renamed MSR DIT (gem5 only)
