

Value predictions inside the DIT sequence, per round

Same binary with every MSR removed predicts per round: architectural clear 33; clear behind a mispredicted branch 1658; clear behind a mispredicted value 1744.

- serializing MSR DIT (drain)
- flush after commit (back-end mode check)
- speculative DIT (this work)
- speculative, register-form clear
- speculative, clear published at commit
- strawman: clear published at writeback
- strawman: branch-only frontier
